DETAILED ACTION

1. Claims 23-41 have been examined.

Papers Submitted

2. It is hereby acknowledged that the following papers have been received and placed of record in the file: Terminal Disclaimer as received on 7/13/2006 and Amendment as received on 6/16/2006.

Terminal Disclaimer

3. The terminal disclaimer filed on July 13, 2006 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. Patent No. 6,625,724 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 23-41 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

6. Claims 23, 29, 36-37, 39-41 contains the trademark/trade name IA-32. Where a trademark or trade name is used in a claim as a limitation to identify or describe a particular material or product, the claim does not comply with the requirements of 35 U.S.C. 112, second

Art Unit: 2183

paragraph. See *Ex parte Simpson*, 218 USPQ 1020 (Bd. App. 1982). The claim scope is uncertain since the trademark or trade name cannot be used properly to identify any particular material or product. A trademark or trade name is used to identify a source of goods, and not the goods themselves. Thus, a trademark or trade name does not identify or describe the goods associated with the trademark or trade name. In the present case, the trademark/trade name is used to identify/describe a type of instruction and, accordingly, the identification/description is indefinite. The examiner recommends replacing all occurrences of "IA-32" with --32-bit architecture--.

7. Furthermore, each of the independent claims does not clearly claim applicant's invention. That is, claims 23, 36, and 40 each call for a series of determining steps where fields of an instruction are checked to see if they contain specific values. Then, the claims call for decoding an expanded logical register identifier. The determining steps and the decoding are not tied together in any way and so the claim essentially says that the expanded logical register identifier is decoded regardless of the outcome of the determining steps. However, applicant's specification discusses decoding an expanded register identifier (or an at least 4-bit register identifier) in response to the claimed determining steps being satisfied. When the determining steps are not satisfied, an expanded register identifier is not decoded. Applicant should make this clear in each of the independent claims.
